

WHAT CLIENTS SAY ABOUT OUR CONTROLLER

“ Works by itself, makes operations easier and improves fertility. It also allows me to be flexible with feeding meal. ”

“ It's simple, it's effective and it gets results. ”

“ Things are running much smoother with less labor. ”

“ Everything is 100%. This has greatly improved the health status of my herd. ”

“ Affordable, convenient and professional. ”

“ I wouldn't be without the system. ”

precision automated nutrition

THE SOLUTION IS IN THE WATER

Terra NutriTECH are global leaders in precision liquid automated nutrition systems that allow producers to monitor and improve swine health.

Our unique award-winning technology means pigs can receive the precise daily dose of any liquid supplement, leading to healthier stock and better returns, with less labor for both producer and supplement supplier.

Additionally, our technology generates insights for both producer and supplier in a clear and easily understood dashboard, which leads to accurate and timely nutritional decisions.

AT TERRA NutriTECH, WE KNOW THE SOLUTION IS IN THE WATER!

PRECISION

Supplementation can be difficult to monitor and control. It is very easy to under or overdose when adding supplements manually and this leads to increased costs and decreased production.

With our controller you can set exact herd numbers and dosage rates. With our precise technology and data insights you can be confident your herd are getting exactly what they need.

AUTOMATED

Our system comes with an easy to use touch screen and app. It automatically injects supplements into the water line and send alerts in the case of errors or risk periods.

Supplements including acids and vaccines can be easily set to dose together or separately over any time period. This means that feeding errors are eliminated and gives huge savings on time and labor.

NUTRITION

Balanced animal nutrition is vitally important. Our system is extremely flexible and can dispense up to 6 different supplements at any one time.

Dosing regimes can be programmed to ensure optimal nutrition at all stages of the production cycle.
